

Cosmos AI Documentation System

Purpose

This repository contains the permanent AI documentation used to develop and maintain the Cosmos Medical Technologies platform.

The documentation is organized so that permanent knowledge, technical architecture, product requirements, current project state, and historical changes remain separate and easy to maintain.

The repository is the authoritative AI knowledge base for the Cosmos project.

Documentation Order

Always read documents in this order:

1. SYSTEM_PROMPT.md
2. HANDOVER.md
3. ARCHITECTURE.md
4. PRODUCT_SPEC.md
5. AI_STYLE_GUIDE.md
6. CHANGELOG.md

Document Responsibilities

SYSTEM_PROMPT.md

Permanent AI operating rules.

Contains:

- Engineering standards
- Decision hierarchy
- Validation workflow
- AI behavior
- Response standards

Update only when permanent operating behavior changes.

HANDOVER.md

Current project state.

Contains:

- Completed work
- Current priorities
- Blockers
- Verification status
- Deployment status
- Known issues
- Next recommended actions

Updated at the end of every development session.

ARCHITECTURE.md

Technical reference.

Contains:

- Repository structure
- APIs
- Database
- Infrastructure
- Deployment
- Integrations
- Application architecture

Update only when technical architecture changes.

PRODUCT_SPEC.md

Business requirements.

Contains:

- Medical workflows
- Business logic
- Billing workflow
- Referral workflow
- Dashboard behavior
- Product requirements

Update only when product behavior changes.

AI_STYLE_GUIDE.md

Permanent development conventions.

Contains:

- Coding standards
- UI conventions
- Documentation standards
- Naming conventions
- Patch methodology
- Development conventions

Update only when permanent development standards change.

CHANGELOG.md

Permanent project history.

Contains:

- Major milestones
- Architecture changes
- Workflow changes
- Significant features
- Major bug fixes
- Documentation milestones

Append new entries only.

Never modify or delete historical entries.

Startup Workflow

For every new AI development session:

1. Upload the latest documentation files.
2. Run the Cosmos Development Session Startup prompt.
3. Wait for the Session Initialization Report.
4. Confirm the recommended next action.
5. Begin development.

Development Workflow

During development:

- Treat the live repository as the source of truth.
- Verify before modifying.
- Request source files instead of screenshots.
- Request all required related files together.
- Use one copy-ready command block whenever safe.
- Split commands into steps only when verification or user confirmation is required.

Handoff Workflow

At the end of every development session:

1. Run the Cosmos Documentation Maintenance & Handoff Protocol.
2. Review the Documentation Status Report.
3. Replace only documents marked Updated.
4. Leave No Change documents unchanged.
5. Investigate any document marked Review Required before replacing it.
6. Append new entries to CHANGELOG.md.

Repository Rules

- The live repository is the source of truth.

- Never invent project information.
- Never reconstruct documentation from memory.
- Never move information into the wrong document.
- Preserve document quality and consistency.
- Prefer small, targeted documentation updates over document rewrites.

Documentation Philosophy

This documentation system follows six principles:

1. One source of truth per topic.
2. Minimal duplication.
3. Clear ownership of every document.
4. Long-term maintainability.
5. Production-ready engineering standards.
6. Accurate documentation over convenience.

Repository Structure

cosmos-ai/

README.md
SYSTEM_PROMPT.md
HANDOVER.md
ARCHITECTURE.md
PRODUCT_SPEC.md
AI_STYLE_GUIDE.md
CHANGELOG.md

Maintenance

Only update documentation when required by its ownership rules.

The expected update frequency is:

Document| Frequency
SYSTEM_PROMPT.md| Rare
HANDOVER.md| Every session

ARCHITECTURE.md| As needed
PRODUCT_SPEC.md| As needed
AI_STYLE_GUIDE.md| Rare
CHANGELOG.md| Append major milestones only

This repository should remain concise, accurate, and production-ready throughout the lifetime of the Cosmos Medical Technologies project.
